TRAINING AND EDUCATION

All training is learning by doing (Hands on) and has a balanced mixture of practical case studies, simulation, applied projects and academic content.

All participants who attended and contributed to the vast majority of the course materials and learning events are issued with a Certificate of Attendance.

Most of the courses are designed to discover real improvement opportunities during the training and in most cases the course project selection can be pre-determined with the managers of the Host Company or organisation.

Where a certificate of competency for each topic / unit, or qualification is required, this will require a competency assessment.
